## 53 (FPT 712) FRTC

## 2018

## FERMENTATION TECHNOLOGY

Paper : FPT 712

· Full Marks : 100

Time : Three hours

## The figures in the margin indicate full marks for the questions.

Answer any five questions from seven.

- 1. Define the following : (any five) 4×5=20
  - (a) Stoichiometry
  - (b) Respiratory Quotient
  - (c) Theoretical oxygen demand
  - (d) Del factor (sterilization job)
  - (e) Maintenance coefficient of microbial cell
  - (f) Dilution rate in CSTR
  - (g) Effectiveness factor of immobilized enzyme.

- Draw microbial cell growth curve and discuss briefly.
  Write microbial cell growth rate equation. What is specific growth rate and doubling time ? What is the unit of specific growth rate ? 10+4+5+1=20
  - Briefly write about batch, continuous and fed batch mode of culture, specifically mentioning their individual operational strategy. 20
  - 4. Write short notes on : (any two)

10+10=20

- (a) Requirement of agitation and aeration in fermentation.
- (b) Immobilized enzyme in Plug Flow Reactor.
- (c) Dynamic method for estimating  $K_L a$ value (volumetric oxygen transfer coefficient).
- 5. (a) Write about the following : (any two) 10+10=20

2

- (i) Monod equation
- (ii) Michaelis-Menten equation (with assumptions)
- (iii) Luedeking and Piret equation.

53 (FPT 712) FRTC/G

- 6. Write about fermentative productions of fermented food like fermented dairy product, fermented vegetable, soya sauce etc. 20
- Write about fermentative production of a commercially important food enzyme and its purification steps from the fermentation broth.
